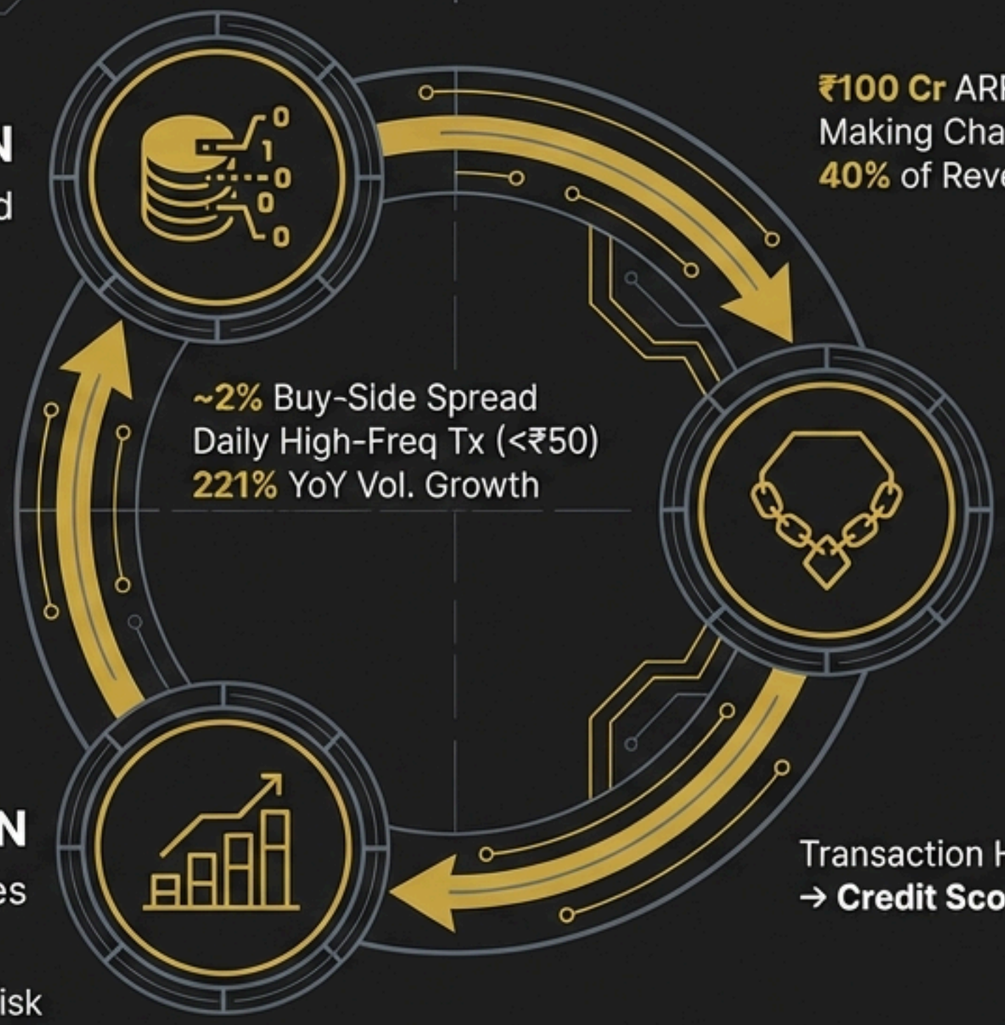
THE ENGINE: A THREE-STAGE VALUE CAPTURE SYSTEM



ACQUISITION
Digital Gold

₹100 Cr ARR (8 Months)
Making Charges + Gold Margin
40% of Revenue

RETENTION
Nek Jewellery

Transaction History
→ **Credit Score**

MONETIZATION
Lending Services

1% Origination Fee
Zero Balance Sheet Risk
Data-Driven Underwriting

Liquidity
→ **Re-Investment**

~2% Buy-Slde Spread
Daily High-Freq Tx (<₹50)
221% YoY Vol. Growth

THE COMPOUNDING EFFECT:

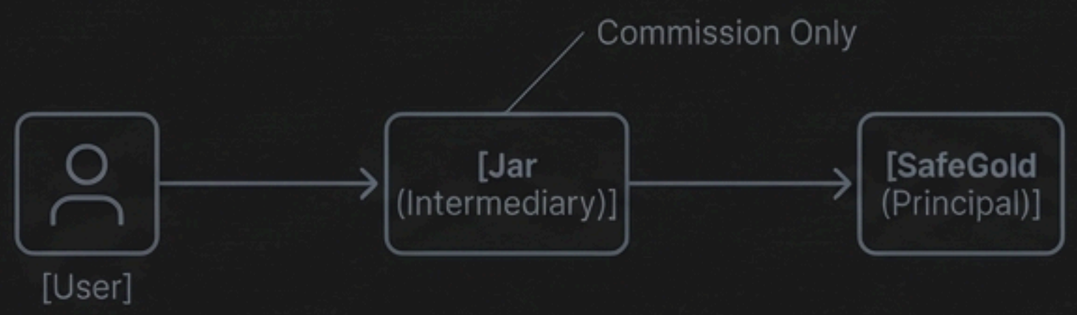
Jar is not a savings app; it is a liquidity capture engine.

Low-margin, high-frequency transactions feed high-margin manufacturing, generating the data required for risk-free lending.

THE UPGRADE: FROM COMMISSION AGENT TO PRINCIPAL SELLER

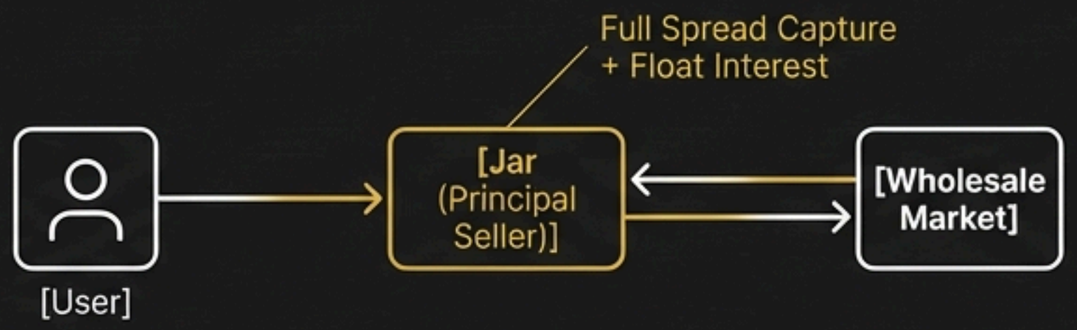
STRUCTURAL SHIFT

FY24 - DISTRIBUTOR MODEL



₹49 Cr
Operating Revenue

FY25 - VERTICAL INTEGRATION



₹208 Cr
Operating Revenue

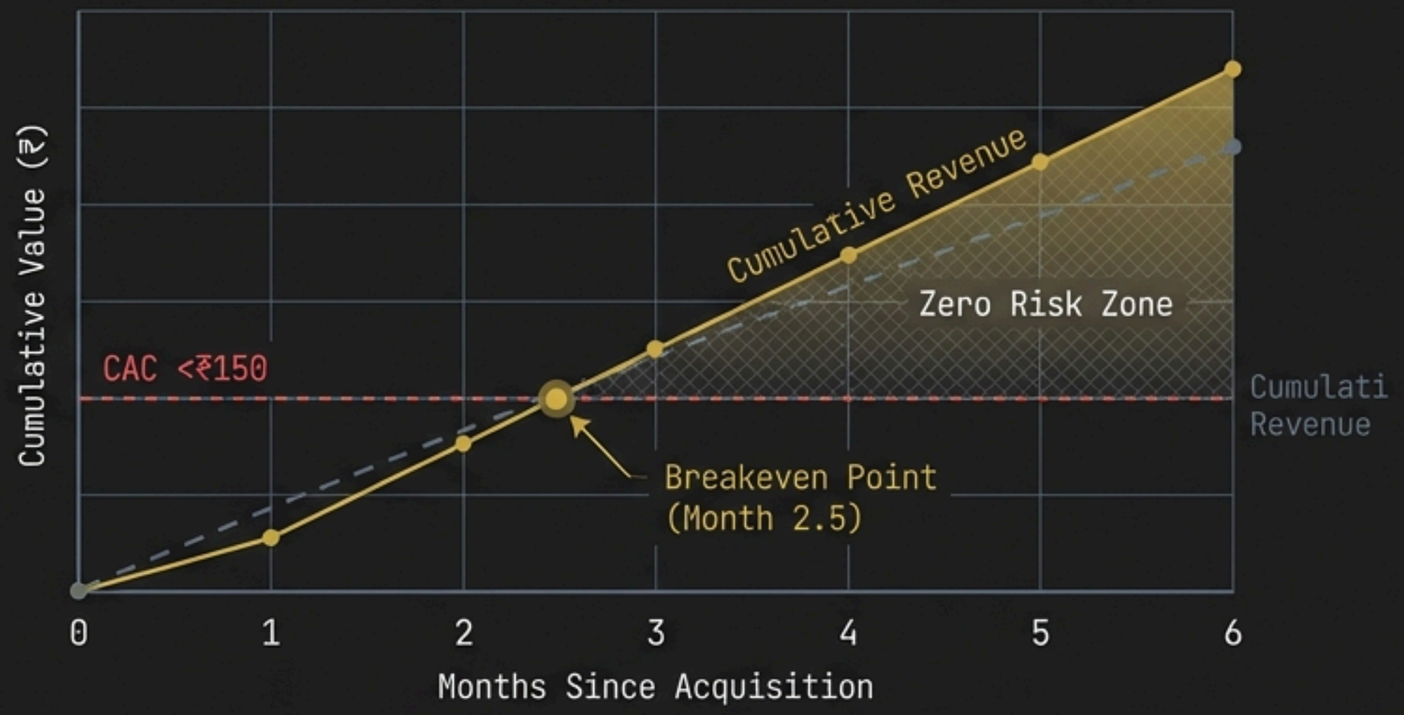
9x Growth

METRIC	VALUE	IMPACT
Gross Revenue (GMV)	₹2,450 Cr	Scale Validation (Ind AS 115)
Operating Revenue	₹208 Cr	Real Income (Performance)
Float Income	₹7.4 Cr	Negative Working Capital Benefit

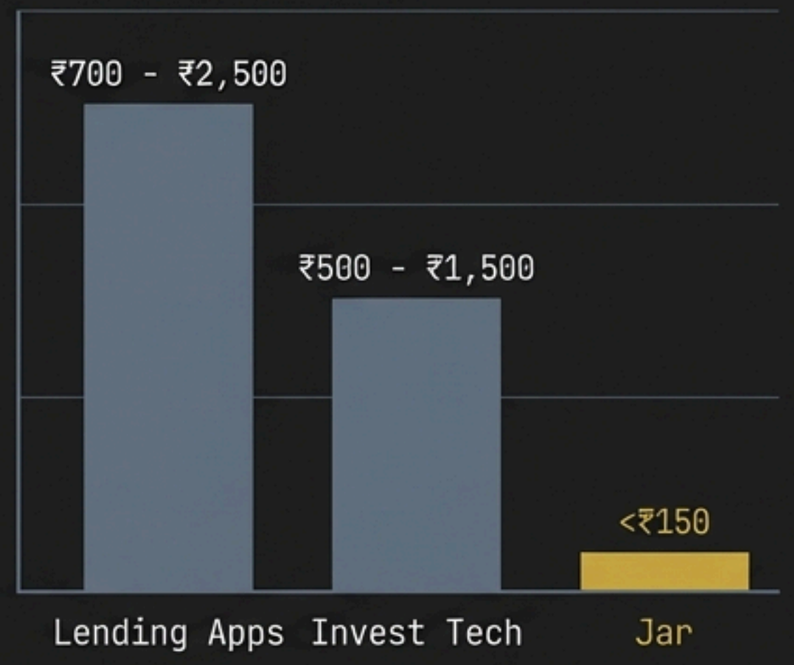
By cutting out the middleman and building the 'Digigold' stack, Jar unlocked wholesale-retail arbitrage, instantly expanding margins on every transaction.

THE PHYSICS: WHY LOW CAC IMMUNIZES JAR AGAINST CHURN

The Breakeven Intersection

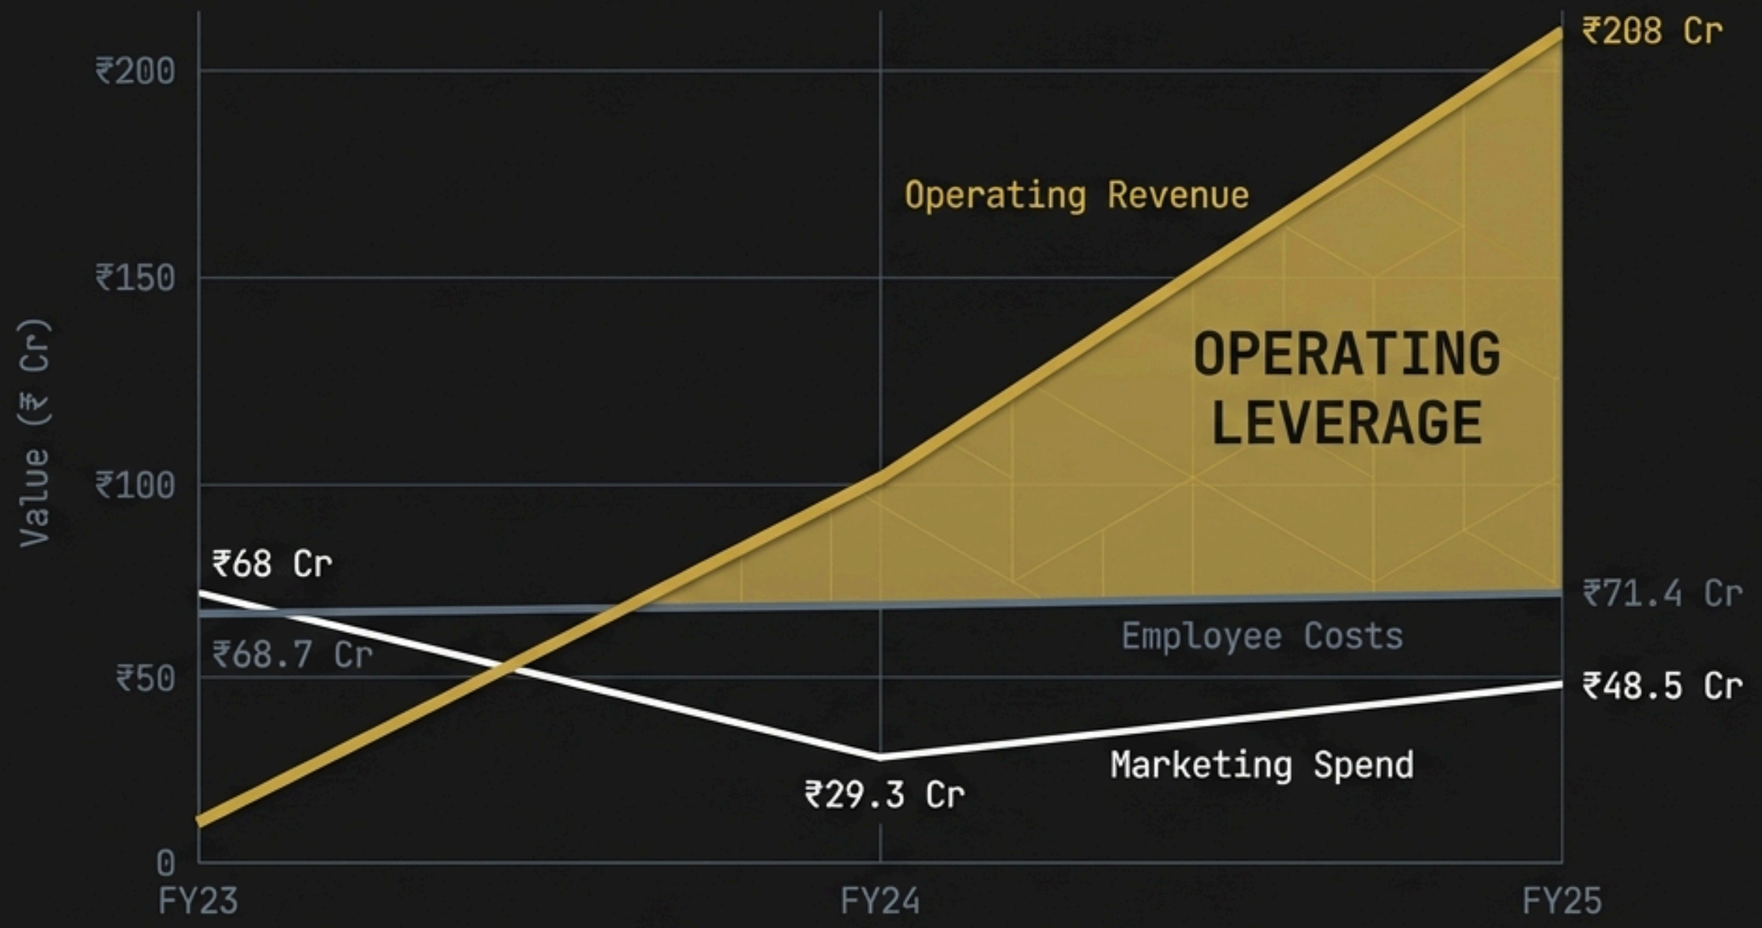


The CAC Anomaly



THE CHURN PARADOX:
Revenue is front-loaded. Margins are earned instantly at the moment of transaction. Even if a user churns in Month 4, the transaction history from Months 1–3 remains profitable. There is no "future revenue debt" required to recover CAC.

THE OUTPUT: DIVERGENT ‘JAWS’ & CORE PROFITABILITY



CORE EBITDA (INDIA)

+₹15.07 Cr

NET PROFITABILITY

Positive

Q4 FY25 & Q1 FY26

MARKETING EFFICIENCY

-57% Spend

While Revenue grew 9x

“Profitability was not achieved by price hikes, but by structural leverage: Vertical integration expanded margins while the organic flywheel collapsed acquisition costs.”
